EDUCATION

Indian Institute of Technology (BHU), Varanasi
Bachelor of Technology (B.Tech.), Electronics Engineering
Manipal Public School, Lucknow
Percentage: **98%** — Ranked **1st** in School (AISSE)

Jul 2021 - May 2025
CGPA: **8.23/10**
2021

SKILLS

Languages	Python • C++ • SQL • Bash • JavaScript • TypeScript
Backend	FastAPI • REST APIs • Authentication • Event-driven Systems • Microservices
Cloud & Infrastructure	Docker • Kubernetes • Azure • Azure DevOps • ArgoCD • Linux • Git
AI/ML	OpenAI APIs • RAG • Hugging Face • PyTorch • DVC

EXPERIENCE

Software Developer — SLB (Schlumberger), Pune, India Jul 2025 - Present

- Designed and productionized a reusable backend rule-generation service that automated domain-specific data validation across client deployments using an LLM-backed inference pipeline, reducing manual rule authoring effort by **~60%**.
- Designed and maintained a reusable authentication library adopted across multiple backend services, reducing service integration effort by **~40%** while standardizing authentication across internal platforms.
- Built event-driven workflows using Azure Service Bus with idempotent consumers, retry policies, and dead-letter queue handling, improving system resiliency and reducing end-to-end latency by **~35%**.
- Optimized **Kubernetes autoscaling** policies across eight production microservices using historical workload analysis, improving deployment stability, scalability, and infrastructure utilization.

Software Engineering Intern — SLB (Schlumberger), Pune, India May 2024 - Jul 2024

- Built reusable Azure DevOps automation pipelines for **Azure and GCP deployments** that generated **immutable infrastructure snapshots**, enabling reliable rollback, auditability, and lower operational overhead.
- Strengthened **disaster-recovery posture** and **audit compliance** for client-hosted workloads — fast configuration rollback from recent blob snapshots, long-horizon traceability via Git — improving deployment audit and incident-investigation lookup efficiency by **~70%**.

PROJECTS

Locality Audit — Neighbourhood Safety Intelligence Platform [\(link\)](#)

- Built a production-ready backend platform that ingests data from multiple external sources, processes incident data through asynchronous pipelines, and exposes semantic search APIs backed by PostgreSQL, Redis, and pgvector.
- Designed scalable semantic search services using PostgreSQL (pgvector) and PostGIS, enabling natural-language locality search with efficient vector indexing.
- Containerized the backend using Docker Compose and built automated data-processing workflows with FastAPI, Redis, PostgreSQL, Bash, and DVC for reproducible deployments. .

Inter IIT Tech Meet 11.0 — Domain-Specific NLP Question Answering

- Built a retrieval-augmented backend question-answering service using FAISS-based semantic search and transformer inference optimized for latency-sensitive workloads.
- Engineered a **FAISS-backed dense retrieval** pipeline over compact **sentence-embedding** representations of the domain corpus, enabling fast **approximate nearest-neighbor** semantic search and accurate question answering within a strict memory and latency budget.

ACHIEVEMENTS

- Specialist** rank on **Codeforces** with a max rating of **1931**. [\(link\)](#)
- 6-Star** rank on **CodeChef** with a max rating of **2263**. [\(link\)](#)
- Secured a **Top 5 finish** at the **Weldright Data Science Competition**, Techfest, IIT Bombay, competing against approximately **25 teams** drawn from top IITs across India.
- Secured **All India Rank 6800** in **JEE Advanced 2021** out of approximately **10 Lakh candidates**, alongside a **99 percentile** in **JEE Main 2021**, ranking among the top performers nationwide.
